* Sworn to no Master, of no Sect am I."

THE CITY WATER SUPPLY.

It will not be denied that of the several duties which the City Council owe to the large and increasing population whose municipal affairs are committed to their management, the first in importance is that of securing an adequate supply of Pure Water, and the second that of providing effectual Drainage. Nor can we deny that for the non-performance of the second of these duties the Council, if they have not been misled by their officers, have a valid excuse.

Effectual drainage, comprehending the entire area of the city, they have been advised, would involve an expenditure of not less than about half a million sterling—an outlay for surpassing all the financial resources they could possibly command, whether by the highest rates of taxation which it is lawful for them to levy, or by the largest loans which it is lawful for them to contract by way of mortgage. In admitting their inability, under the circumstances in which they have heretofore been placed, to carry out so costly a work to the full extent, we do not necessarily admit that they have carried it out to the extent which was practicable. The Sewerage Act, having been cured of the technical defect which suspended its operation, is now the undoubted law of the land, and it remains to be seen whether the Council will to the best of their ability, and with cordial good-will, give effect to its salutary provisions, by exercising the new powers which it confers upon their body—or, whether these powers must be vested in some other quarter.

Whatever may be said, however, on the subject of Drainage, it is impossible to maintain that on the still more important subject of Water Supply, the City Council have done all they could to avert one of the direst calamities which could possibly befall a large population. They have, it is true, shown some activity in laying down main pipes for Water Distribution. But to provide the means of distributing an article without providing, as far as may be practicable, a per-

manent supply of the quantity required is to do a thing not very creditable to the common sense of the doer. A channel without a fountain, pipes for water without water for the pipes, might be conveniently dispensed with. And although things have not yet come to this extremity, they have for years past been threatening to do so.

When it is remembered that our present Water Works were commenced more than a quarter of a century ago, when the population of the town was not one-fifth of its present numbers, nor one-tenth of what its numbers will soon become—that they were constructed at the expense of the Government, and made over to the City Corporation without charge—and that during the nine years that have elapsed since this transfer took place, no decided steps have been taken either to augment the supply of Water, or to prevent its diminution, or to uphold the Tunnel through which it flows against accidental injury and tear, there is surely reason for great dissatisfaction, and for serious apprehension.

It cannot have been forgotten by the citizens that some two or three summers ago, during a drought by no means so severe as those which occurred in the years 1829 and 1838, the waters at the head of the tunnel gave such unequivocal indications of failure as to cause general alarm, and as to make it tolerably certain that had the drought continued a few weeks longer the supply would have ceased altogether. Participating in the anxieties which were thus spread throughout the city, the City Council appointed a special Committee to inquire into the whole subject of our water supply; but although the Committee appear to have proceeded so far as to take evidence, it has been publicly alleged that to this day, at the end of two years from the date of their appointment, they have brought up no report, nor made any recommendation!

Here is a neglect of duty to which we scarcely remember a parallel. Fortunately, these two years have not been marked by any severe visitation of drought; and until the present summer the inhabitants have been put to no inconvenience for want of water. But for this no thanks are due either to the Special Committee or to the body from whom they received their appointment, and who ought to have insisted upon their doing their duty. For aught that has been done during the last two years from the chosen guardians of this vital department to Pollock is to be put up for sale to them or any of them. It is next alleged that they caused this land to be put up for sale by Abraham Pollock, and that Thomas Howell and William Farlow, defendants, attended at the sale and became the purchasers of the said land for £600. As to the instructions to sell, the only instruments given of which was evidence were by one Edward Lee, who was married to Mrs. Howell, and who had been retained by the defendant to draw up a conveyance under the will of George Howell; but, unless the estate was settled to her separate use, so as to enable her to dispose of it as sole, no agreement for the sale of the estate could be enforced in law or in equity—not would an agreement by her husband bind her. But, as to the other devisees, what authority had Lee to give instructions to bind them? And if these defendants were now seeking to bind them to the sale, in what way could they be compelled to Pollock to evidence to effect that?

Now are we at the present moment free from danger of some such calamity.

An honorable Member of the Legislature, who is also a City Councillor, reported that he had been informed by his constituents that some two or three summers ago, during a drought by no means so severe as those which occurred in the years 1829 and 1838, the waters at the head of the tunnel gave such unequivocal indications of failure as to cause general alarm, and as to make it tolerably certain that had the drought continued a few weeks longer the supply would have ceased altogether. Participating in the anxieties which were thus spread throughout the city, the City Council appointed a special Committee to inquire into the whole subject of our water supply; but although the Committee appear to have proceeded so far as to take evidence, it has been publicly alleged that to this day, at the end of two years from the date of their appointment, they have brought up no report, nor made any recommendation!

It is next alleged that they caused this land to be put up for sale by Abraham Pollock, and that Thomas Howell and William Farlow, defendants, attended at the sale and became the purchasers of the said land for £600. As to the instructions to sell, the only instruments given of which was evidence were by one Edward Lee, who was married to Mrs. Howell, and who had been retained by the defendant to draw up a conveyance under the will of George Howell; but, unless the estate was settled to her separate use, so as to enable her to dispose of it as sole, no agreement for the sale of the estate could be enforced in law or in equity—not would an agreement by her husband bind her. But, as to the other devisees, what authority had Lee to give instructions to bind them? And if these defendants were now seeking to bind them to the sale, in what way could they be compelled to Pollock to evidence to effect that?

Now are we at the present moment free from danger of some such calamity.

As to any contract of sale having been signed by them, the evidence is by no means satisfactory. It is stated to have been signed by Mr. Pollock more as a matter of inference, than as a fact. He does not swear that he recollects this particular contract being signed, but he believes there must have been one from the inevitable custom of his business. He does not swear that he recollects any attesting witness, and his own knowledge of his own custom, and his own knowledge of the plaintiff's custom, are to be very imperfect, for he only ventures to state that he believes it was his general custom to have an attesting witness.

Then, assuming that a contract was signed, we are at a loss to know what the terms of it were—the conditions of sale,—or when the money was to be paid. It may have been a condition that it was optional with the party to pay the rent, or principal, or interest, or both, at different periods, or that the payment was to be deferred, or that the particular land in question was to be sold to them or any of them. It is next alleged that they caused this land to be put up for sale by Abraham Pollock, and that Thomas Howell and William Farlow, defendants, attended at the sale and became the purchasers of the said land for £600. As to the instructions to sell, the only instruments given of which was evidence were by one Edward Lee, who was married to Mrs. Howell, and who had been retained by the defendant to draw up a conveyance under the will of George Howell; but, unless the estate was settled to her separate use, so as to enable her to dispose of it as sole, no agreement for the sale of the estate could be enforced in law or in equity—not would an agreement by her husband bind her. But, as to the other devisees, what authority had Lee to give instructions to bind them? And if these defendants were now seeking to bind them to the sale, in what way could they be compelled to Pollock to evidence to effect that?

He does not swear that he recollects any attesting witness, and his own knowledge of his own custom, and his own knowledge of the plaintiff's custom, are to be very imperfect, for he only ventures to state that he believes it was his general custom to have an attesting witness.

Then, assuming that a contract was signed, we are at a loss to know what the terms of it were—the conditions of sale,—or when the money was to be paid. It may have been a condition that it was optional with the party to pay the rent, or principal, or interest, or both, at different periods, or that the payment was to be deferred, or that the particular land in question was to be sold to them or any of them. It is next alleged that they caused this land to be put up for sale by Abraham
